A practical introduction to APL 1 & APL 2

Published 1st May 2008
ISBN 0952416719
RRP £9.99

DO YOU KNOW SOMEBODY who could benefit from an introduction to the World's most powerful, straightforward and versatile information processing language for business and data research?

This book is for them.

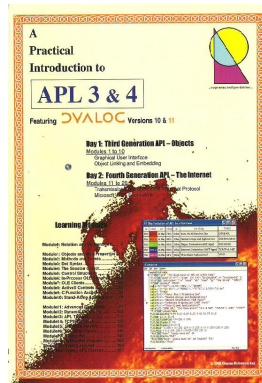

This slim 56 page volume introduces basic APL notation as found at the heart of almost all modern dialects of APL. APL 1 describes the core of the language and APL 2 takes the student through the foundations of second generation APL as pioneered by IBM, MicroAPL, STSC and Dyalog.

A practical introduction to APL 3 & APL 4

ARE YOU ALREADY an expert APL programmer who would like to master Dyalog APL, the World's leading APL interpreter and application development environment?

The Sun is rising! This book is for you.

This volume has 195 full colour pages introducing, in tutorial form, object-oriented APL 3 and Internet-oriented APL 4, with introductions to almost all the other innovations introduced by Dyalog over the last quarter century, including dot syntax, control structures, OLE automation, dynamic functions, threads, TCP sockets, .NET integration and primitive classes.

Published 17th July 2008
ISBN 0952416727
RRP £29.99
